

## Practice V-Boards for Cockles

Use the template below to create a class set of vboards for practising measuring the size of cockles as per the instructions in Powerpoint Presentation Part 2. Note these practice v-boards will only enable measurement of cockles that are no bigger than 35mm, in order to fit the template onto an A4 page.

### Instructions

1. Photocopy the templates and paste onto thick cardboard. The two smaller rectangles (with numbers) will especially need to be mounted on thick cardboard - you may need to glue two or more layers of cardboard together to achieve this.
2. Cut out around outside rectangles. You should have three separate pieces.
3. Glue the two smaller rectangles with numbers along each side of the 'V'. Match the horizontal lines.
